

ECE LABORATORY SAFETY RULES

Students working in any laboratory in Engineering and Computer Science (ECS) at the University of Denver agree that they are aware of and will abide by all applicable safety policies. By working in any ECS lab, a student acknowledges that there may be inherent safety risks associated with such work and continues to work in the lab at his/her own risk.

Laboratory Safety

1. In the event of an emergency, shut down the power to the equipment and notify the instructor if possible.
2. Students shall ask for permission from the instructor/supervisor before using an open lab space.
3. Food, drink, or tobacco products are not permitted in the lab.
4. Coats, book-bags, backpacks, and the like shall not be placed on equipment, but shall be stored under workbenches or otherwise out of the aisles.
5. A student working alone in any ECE lab may do keyboarding (e.g. typing on the computers). An open parts kit, parts and/or tools on the workbench table, cables attached to microcontrollers or PCs, etc., will be interpreted as a violation of this rule.
6. All circuits shall be de-energized when removing, repositioning, installing components, or wiring.
7. All circuits above 24V shall be de-energized when performing tasks such as moving test leads or making adjustments.
8. Conductive jewelry such as rings, watches, bracelets, necklaces, and the like should be removed while working in the lab.
9. Troubleshooting and testing for circuits operating below 24V shall be done using the one-hand method.
10. Students must report to the instructor or lab manager for any defects or deficiencies in equipment, test leads, power supply leads, and especially soldering iron leads at the lab station at which you are working.
11. Students should be alert for any potential problems and always have a plan for what must be done before doing it.
12. Horseplay will not be tolerated and will result in dismissal from the lab.
13. Upon leaving a lab station, stow stools/chairs under the bench, clear all trash to the appropriate receptacle, and return all equipment to the standard setup for that lab.

Any violation of these policies, as well as any other action that puts the student or anyone else at risk of bodily injury, will result in the following:

- Your name will be taken, and you will be instructed to leave.
- A second violation of this policy will result in your privileges to use any ECE open lab being revoked.

Laboratory Safety Policy Acknowledgement and Agreement

By signing this agreement sheet or Lab notebook supplied by your lab Professor/instructor, you are acknowledging that:

1. You have read the **ECE Laboratory Safety Rules**; you have been introduced to the safety rules and policies for the laboratory through a lab or class presentation.

And

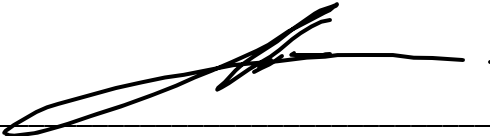

2. You fully understand that you must abide by these rules and policies to assure your safety as well as the safety of others around you. And you will do your part to assure a safe working environment conducive to productive learning.

Additionally,

You understand that failure to comply with these rules and policies may result in course penalties or loss of laboratory privileges.
